## **GMT Environmental Footprint Statement & Results 2016-2017**

As a global manufacturer of consumer and automotive products, GMT recognizes that energy usage, water consumption, greenhouse gas (GHG) emissions and waste to landfill affect our climate and may pose a serious threat to the environment. We believe that everyone shares responsibility to improve energy and water usage efficiency, reduce GHG emissions and lower waste going to landfill. GMT supports global, national and local efforts to mitigate the impact of climate change and promote efficient use of natural resources. GMT is committed to reducing energy usage, water consumption, GHG emissions and waste to landfill by 3-5% per year per pound of product produced by increasing operating efficiencies and continually improving technologies.

1. 2016-2017 Energy Consumption 2016-2017 Results:
  - a. Reduced natural gas consumption by 12.2% per pound of product produced
  - b. Reduced electricity consumption by 4.7% per pound of product produced
2. 2016-2017 GHG Reduction Results: Reduced GHG emissions by 18% overall due to lowering natural gas consumption.
3. Water Consumption 2016-2017 Results: Reduced water consumption by 0.40% per pound of product produced.
4. 2016-2017 Solid Waste to Landfill Results: Reduced pounds to landfill by 32.2% per pound of product produced.
